GRAPE DISEASE TESTING ORDER FORM

Sampling Directions: Each piece of canewood should be about 6 inches long collected above the standard 2-bud spur. Put five (5) pieces from one vine or up to five different vines into one gallon freezer-grade Ziploc bag upon collection. Label and identify each sample bag. Keep samples cool to prevent drying and microbial degradation. Ship to us for next day delivery to: **Agri-Analysis LLC, 950 West Chiles Road, Davis, CA 95618**. Please include this form and/or any cover letter. We recommend testing for RBaV for all grapevine materials.
